

# Proven Perfection

*CNC Machining*

Complex casting and machining projects such as the stainless steel, high-performance boat propeller, shown here, are routine at Barron Industries.

## Precision and speed.

At Barron Industries, we work to support our customers by serving as the “one-stop” shop that offers turn-key solutions quickly and efficiently. We’ve structured ourselves to take projects from concept to completion in as short a time as possible. As a result, customers consistently turn to us for:

- Engineering and CAD design
- Rapid prototypes
- Precision investment casting
- CNC machining
- Welded fabrication
- Complete assembly

Our customers frequently use our rapid response CNC machining capabilities, a fast turnaround process for parts that

have to be machined right and completed overnight.

We have invested in some of the world’s finest CNC machines. They combine the optimum blend of speed and superior rigidity necessary to achieve unparalleled productivity and reliability resulting in fast deliveries.

We strive for perfection as we regularly machine alloy, stainless steels, cobalt- and nickel-based alloys, and aluminum and copper non-ferrous materials to our customers’ demanding standards.

And we’re precise. Consider the fighter jet ejection seat nozzle we produced that was ground to an exacting .0005” requirement. Just one example from a long list.

Our Makino A81 vertical milling center, developed for the machining of tough and hard materials, is ideally suited for large-diameter boring and face milling on such challenging materials as 17-4 ph stainless steel and Inconel 625 alloys.

In addition, we continually update our software, tooling and equipment to address changing market demands.

At Barron Industries, our speed and flexibility allow us to quickly and smoothly respond to our customers’ needs. They’ve come to expect a high level of service from us, and they keep coming back because we keep delivering on our promises.
